

# Perinatal Bundle—Vacuum Bundle

Month: \_\_\_\_\_

A retrospective chart review tool to determine if a bundle of interventions for vacuum delivery is consistently implemented and documented.

- **Alternative Labor Strategy Considered:** Alternatives were discussed and documented as part of the risk/benefit discussion
- **Prepared Patient:** Informed consent discussion is documented by provider
- **High Probability of Success:** Fetal position vertex, +2 station or greater, estimated fetal weight (small, medium, or large is acceptable)
- **Maximum Application Time / # Pop-Offs:** No more than 30 minutes total time elapsed from beginning to end of procedure; no more than 3 pop-offs
- **Exit Strategy Available:** Evidence that the procedure is done by the obstetrician (OB) or that the family practitioner consulted the OB and the OB is present; evidence that the special care nursery (SCN) staff are notified and/or that the neonatal nurse practitioner (NNP) is present

Mom (chart # and name)	Alternative (considered and documented)	Prepared (informed consent)	Success Probability (position, station, estimated fetal weight)	Max Time/Pop-Offs (30 min max/3 pops max)	Exit Strategy (OB and NNP present or SCN notified)	Complete Bundle/ Incomplete Bundle
